

Statement of Investment Principles

For the Kenwake Pension Scheme

Effective from June 2024

1. Introduction

This Statement of Investment Principles (“SIP”) has been produced by the Trustee of the Kenwake Pension Scheme.

It sets out our policies on various matters governing investment decisions for the Kenwake Pension Scheme (“the Scheme”), which is a Defined Benefit (“DB”) Scheme.

This SIP replaces the previous SIP dated 31 March 2022.

This SIP has been prepared after obtaining and considering written advice from LCP, our investment adviser, whom we believe to be suitably qualified and experienced to provide such advice. The advice considered the suitability of investments including the need for diversification given the circumstances of the Scheme and the principles contained in this SIP.

We have consulted with the relevant employers in producing this SIP, but we as the Trustee have decided the investment arrangements as described in Section 4 independently.

We will review this SIP from time to time and will amend it as appropriate. Reviews will take place without delay after any significant change in investment policy and at least once every three years.

This SIP contains the information required by legislation, and also considers the Pension Regulator’s guidance on investments.

2. Investment objectives

The primary objective for the Scheme is to ensure that the benefit payments are met as they fall due. In addition to this primary objective, we have the following objectives:

- that the Scheme should be fully funded on a technical provisions basis;
- that the Scheme has a long-term journey plan in place to help it achieve full funding by 2029 on the Technical Provisions basis. Progress against this long-term journey plan is reviewed on a regular basis via reporting from our advisers; and
- that the expected return on the Scheme’s assets is maximised whilst managing and maintaining risk at an appropriate level.

3. Investment strategy

With input from our advisers and in consultation with the employers, we reviewed the investment strategy in September 2023, considering the objectives described in Section 2.

The investment strategy is shown in the following table.

Asset class	Strategic allocation
Global equities	5.0%
Multi-asset credit	15.0%
Asset-backed securities	7.5%
Corporate bonds	22.5%
Liability driven investment & collateral	50.0%
Total	100.0%
Target interest rate and inflation hedging (Technical provisions basis)	100%

Our policy is to target the maximum expected return level subject to ensuring the level of investment risk is appropriate to reflect the Scheme's circumstances. We believe that the strategy above meets this objective.

There is no formal rebalancing policy. We monitor the asset allocation from time to time. If material deviations from the strategic allocation occur, we will consider with our advisers whether it is appropriate to rebalance the assets.

As the Scheme matures over time, we intend to de-risk the investment strategy to reflect the change in the liability profile (ie switching from growth to matching assets).

4. Considerations in setting the investment arrangements

When deciding how to invest the Scheme's assets, it is our policy to consider a range of asset classes, taking account of the expected returns and risks associated with those asset classes, as well as our beliefs about investment markets and which factors are most likely to impact investment outcomes. The primary ways that we manage investment risk is via diversification, ensuring we receive

professional written advice prior to making any material investment decision, and our ongoing monitoring and oversight of the investments. Further details of specific risks (for example equity risk, credit risk and currency risk) and how we measure and manage those risks is set out in Appendix 2 of the SIP.

In setting the strategy it is our policy to consider:

- our investment objectives, including the target return required to meet these
- the circumstances of the Scheme, including the profile of the benefit cash flows (and the ability to meet these in the near to medium term), the funding level, and the strength of the employer covenant
- the need for appropriate diversification between different asset classes to manage investment risk, and ensure that both the overall level of investment risk and the balance of individual asset risks are appropriate.

We also consider any other factors which we believe to be financially material over the applicable time horizons to the funding of the DB benefits, including environmental, social and governance ("ESG") factors and the risks and opportunities relating to climate change.

Our key investment beliefs, which influenced the setting of the investment arrangements, are as follows:

- asset allocation is the primary driver of long-term returns
- costs may have a significant impact on long-term performance and therefore obtaining value for money from the investments is important
- investment managers who can consistently spot and profitably exploit market opportunities are difficult to find, and therefore passive management is usually better value
- risk-taking is necessary to achieve return, but not all risks are rewarded. Equity, credit, and illiquidity are the primary rewarded risks. Risks that do not have an expected reward should generally be avoided, hedged, or diversified
- ESG factors should be considered when making investment decisions, and managers may be able to improve risk-adjusted returns by doing this
- climate change is a financially material systemic issue that presents risks and opportunities for the Scheme over the short, medium and

long term.

5. Implementation of the investment arrangements

Before investing in any manner, we obtain and consider proper written advice from our investment adviser as to whether the investment is satisfactory, having regard to the need for suitable and appropriately diversified investments.

We have signed agreements with the investment managers setting out the terms on which the portfolios are to be managed.

We have limited influence over managers' investment practices because all the Scheme's assets are held in pooled funds, but we expect our managers to operate suitable practices within the parameters of the funds they are managing and improve them as necessary.

Our view is that the fees paid to the investment managers, and the possibility of their mandate being terminated, ensure they are incentivised to provide a high quality service that meets the stated objectives, guidelines, and restrictions of their fund. However, in practice managers cannot fully align their strategy and decisions to the (potentially conflicting) policies of all their pooled fund investors in relation to strategy, long-term performance of debt/equity issuers, engagement, and portfolio turnover.

It is our responsibility to ensure that the managers' investment approaches are consistent with our policies before any new appointment, and to monitor and to consider terminating any arrangements that appear to be investing contrary to those policies. We expect investment managers to make decisions based on assessments of the longer term performance of debt/equity issuers, and to engage with issuers to improve their performance (or where this is not appropriate to explain why). With support from our investment adviser, we assess this when selecting and monitoring managers.

We evaluate investment manager performance over both shorter and longer term periods as available. Except in closed-ended funds where the duration of the investment is determined by the fund's terms, the duration of a manager's appointment will depend on strategic considerations and the outlook for future performance. If a manager is not meeting its performance objectives, we will consider alternative arrangements.

Our policy is, with support from our investment adviser to evaluate each of our investment managers by considering performance, the role it plays in helping to meet our overall long-term objectives, taking account of risk, the need for

diversification and liquidity. Each manager's remuneration, and the value for money it provides, is assessed in light of these considerations.

We recognise that portfolio turnover and associated transaction costs are a necessary part of investment management. Since the impact of these costs is reflected in performance figures used in our assessment of the investment managers, we do not explicitly monitor portfolio turnover. We expect our investment consultant to incorporate portfolio turnover and resulting transaction costs as appropriate in its advice on the Scheme's investment mandates.

6. Realisation of investments

We instruct disinvestments as required for benefit payments and other outgoings. Our preference is for investments that are readily realisable, but recognise that achieving a well-diversified portfolio may mean holding some investments that are less liquid. In general, our policy is to use cash flows to rebalance the assets towards the strategic asset allocation, and also to receive income from some of the portfolios where appropriate.

7. Financially material considerations and non-financial matters

We consider how environmental, social, governance ("ESG") considerations (including but not limited to climate change) should be addressed in the selection, retention, and realisation of investments, given the time horizon of the Scheme and its members.

We influence the Scheme's approach to ESG and other financially material factors through our investment strategy and manager selection decisions. We expect all of our investment managers to take account of financially material factors (including climate change and other ESG factors) within the parameters of the mandates they are set. We seek to appoint managers that have the skills and processes to do this and our investment adviser periodically reviews how the managers are taking account of these issues in practice.

All the Scheme's assets are invested in pooled funds. We have limited influence over managers' investment practices where assets are held in pooled funds, but we monitor our managers ESG practices within the parameters of their funds and will encourage improvement when necessary.

We do not consider any non-financial matters (ie matters relating to the ethical and other views of members and beneficiaries, rather than considerations of financial risk and return) in the selection, retention, and realisation of investments.

8. Voting and engagement

We recognise our responsibilities as owners of capital, and believe that good stewardship practices, including monitoring and engaging with investee companies, and exercising voting rights attaching to investments, protect and enhance the long-term value of investments.

We have delegated to the investment managers the exercise of rights attaching to investments, including voting rights, and engagement with relevant persons such as issuers of debt and equity, stakeholders and other investors about relevant matters such as performance, strategy, capital structure, management of actual or potential conflicts of interest, risks and ESG factors.

We do not monitor or engage directly with issuers or other holders of debt or equity, but alongside our investment adviser we will engage with current and prospective investment managers on matters including ESG and stewardship when necessary. We expect the investment managers to exercise ownership rights and undertake monitoring and engagement in line with their policies on stewardship, considering the long-term financial interests of the beneficiaries. We expect our investment adviser to ask the managers on our behalf to communicate their policies on stewardship to us from time to time, and provide us with reporting on the results of their engagement and voting activities regularly and at least once a year.

We seek to appoint managers that have strong stewardship policies and processes, reflecting the principles of the UK Stewardship Code 2020 issued by the Financial Reporting Council, and from time to time with the support of our investment adviser we review how these are implemented in practice.

Appendix 1:

Investment governance, responsibilities, decision-making and fees

We have decided on the following division of responsibilities and decision making for the Scheme. This division is based upon our understanding of the various legal requirements placed upon us and our view that the division of responsibility allows for efficient operation and governance of the Scheme overall. Our investment powers are set out within the Scheme's governing documentation.

1. Trustee

Our responsibilities include:

- setting the investment strategy, in consultation with the employers
- setting investment policies, including those relating to financially material factors and the exercise of rights and engagement activities in respect of the investments
- putting effective governance arrangements in place and documenting these arrangements in a suitable form
- monitoring, reviewing, and replacing investment managers, investment advisers, actuary, and other service providers
- monitoring the exercise of investment powers that we have delegated to the investment managers and monitoring compliance with Section 36 of the Pensions Act 1995 (as amended)
- communicating with members as appropriate on investment matters, such as our assessment of our effectiveness as a decision-making body, the policies regarding responsible ownership and how such responsibilities have been discharged
- reviewing the SIP and modifying it as necessary.

2. Investment managers

The investment managers' responsibilities include:

- managing the portfolios of assets according to their stated objectives, and within the guidelines and restrictions set out in their respective investment manager agreements and/or other relevant governing documentation
- taking account of financially material considerations (including climate change and other ESG considerations) as appropriate when managing the portfolios of assets
- exercising rights (including voting rights) attaching to investments and undertaking engagement activities in respect of investments
- providing regular information concerning the management and performance of their respective portfolios
- having regard to the provisions of Section 36 of the Act insofar as it is necessary to do so.

The custodians of the portfolios are responsible for safe keeping of the assets and facilitating all transactions within the portfolios.

3. Investment adviser

The investment adviser's responsibilities include:

- advising on how material changes within the Scheme's benefits, membership, and funding position may affect the manner in which the assets should be invested
- advising on the selection, and review, of the investment managers, incorporating its assessment of the nature and effectiveness of the managers' approaches to financially material considerations (including climate change and other ESG considerations)
- assisting us with reviews of this SIP.

4. Fee structures

The provision of investment management and advisory services to the Scheme results in a range of charges to be met, directly or indirectly, by deduction from the Scheme's assets. We have agreed terms with the Scheme's investment adviser, under which work undertaken is charged for by an agreed fixed fee or on a "time-cost" basis.

The fee structure used in each case has been selected with regard to existing custom and practice, and our view as to the most appropriate arrangements for the Scheme, and we keep the fee structures under review.

5. Performance assessment

We are satisfied that there are adequate resources to support our investment responsibilities, and that we have sufficient expertise to carry out our role effectively. It is our policy to assess the performance of the Scheme's investments, investment providers and professional advisers from time to time. We will also periodically assess the effectiveness of our decision-making and investment governance processes and will decide how this may then be reported to members.

6. Working with the sponsoring employers

When reviewing matters regarding the Scheme's investment arrangements, such as the SIP, we seek to give due consideration to the employers' perspective. Whilst the requirement to consult does not mean that we need to reach agreement with the employers, we believe that better outcomes will generally be achieved if we work with the employers collaboratively.

Appendix 2: Policy towards risk

1. Risk capacity and appetite

Risk capacity is the maximum level of risk that we consider to be appropriate to take in the investment strategy. Risk appetite is how much risk we believe is appropriate to take in order to meet the investment objectives. Taking more risk is expected to mean that those objectives can be achieved more quickly, but it also means that there is a greater likelihood that the objectives are missed, in the absence of remedial action.

When assessing risk and reviewing the investment strategy, we consider:

- the strength of the employer covenant and how this may change over time
- the agreed journey plan and employer contributions
- the Scheme's long-term and shorter-term funding targets
- the Scheme's liability profile, its interest rate and inflation sensitivities, and the extent to which these are hedged
- the Scheme's cash flow and target return requirements
- the level of expected return and expected level of risk (as measured by Value at Risk ("VaR")), now and as the strategy evolves.

2. Approach to managing and monitoring risks

There are different types of investment risk that are important to manage, and we monitor these on a regular basis. These include, but are not limited to:

Risk of inadequate returns

A key objective is that the assets produce a sufficient long-term return in excess of the liabilities, and we have set an appropriate target return for the assets accordingly. There is a risk that the return experienced is not sufficient. This risk has been considered in setting the investment strategy.

Risk from lack of diversification

This is the risk that failure of a particular investment, or the general poor performance of a given investment type (eg equities), could materially adversely affect the Scheme's assets. We believe that the Scheme's assets are adequately diversified between different asset classes and within each asset class. This was a key consideration when determining the Scheme's investment arrangements.

Equity risk

We believe that equity risk is a rewarded investment risk, over the long term. We consider exposure to equity risk in the context of the Scheme's overall investment strategy and believe that the level of exposure to this risk is appropriate.

Credit risk

The Scheme is subject to credit risk because it invests in bonds via pooled funds. This risk is managed by only investing in pooled funds that have a diversified exposure to different credit issuers.

Currency risk

Whilst the majority of the currency exposure of the Scheme's assets is to Sterling, the Scheme is subject to currency risk because some of the Scheme's investments are held in overseas markets. We consider the overseas currency exposure in the context of the overall investment strategy, and believe that it diversifies the strategy and is appropriate.

Furthermore, we manage the amount of currency risk by investing in pooled funds that hedge overseas currency exposure where appropriate.

Interest rate and inflation risk

The Scheme's assets are subject to interest rate and inflation risk because some of the Scheme's assets are held in bond funds and Liability Driven Investment ("LDI") funds. However, the interest rate and inflation exposure of the Scheme's assets provide protection (hedges) part of the corresponding risks associated with the Scheme's liabilities. Given that this should reduce the volatility of the funding level, we believe that it is appropriate to manage exposures to these risks in this manner.

Investment manager risk

This is the risk that an investment manager fails to meet its investment objectives. Prior to appointing an investment manager, we receive written professional advice, and may undertake a manager selection exercise. We monitor the investments regularly against their objectives and receive ongoing professional investment advice as to their suitability.

Climate-related risks

Climate change is a source of risk, which could be financially material over both the short and longer term. This risk relates to the transition to a low carbon economy, and the physical risks associated with climate change (eg extreme weather). We seek to appoint investment managers who will manage this risk appropriately, and from time to time review how this risk is being managed in practice.

Other environmental, social and governance (ESG) risks

ESG factors are sources of risk, which could be financially material over both the short and longer term. These include risks relating to unsustainable or socially harmful business practices, and unsound corporate governance. We seek to appoint investment managers who will manage these risks appropriately, and from time to time review how these risks are being managed in practice.

Illiquidity/marketability risk

This is the risk that the Scheme is unable to realise assets to meet benefit cash flows as they fall due, or that the Scheme will become a forced seller of assets in order to meet benefit payments. We are aware of the Scheme's cash flow requirements and believe that this risk is managed by maintaining an appropriate degree of liquidity across the Scheme's investments and by investing in income generating assets, where appropriate.

Collateral adequacy risk

The LDI manager may call for additional cash to be paid to the LDI portfolio in order to support a given level of leverage. Collateral adequacy risk is the risk that we are not able to post additional cash to the LDI fund within the required timeframe when requested. A potential consequence of this risk is that the Scheme's interest rate and inflation hedging could be reduced and that the Scheme's funding level could suffer subsequently as a result. In order to manage this risk, our objective is that the Scheme has a sufficient allocation to cash and other highly liquid assets that could be used to meet LDI collateral calls.

Other non-investment risks

We recognise that there are other non-investment risks faced by the Scheme. We take these into consideration as far as practical in setting the investment arrangements.

Examples include:

- longevity risk (risk that members live, on average, longer than expected); and
- sponsor covenant risk (risk that, for whatever reason, the sponsoring employer is unable to support the Scheme as anticipated).

Both investment and non-investment risks can lead to the funding position materially worsening. We regularly review progress against the funding target.
